SPREAD THE CURE

Approximately 230,000 people in Australia have hepatitis C and almost 11,000 are newly diagnosed each year.\(^1,2\)

THIS EPIDEMIC CAN BE STOPPED
According to estimates, Australia can completely eradicate hepatitis C in about 10 years.\(^3\)

BUT YOUR INVOLVEMENT IS NEEDED
Increasing primary healthcare’s role in managing hepatitis C is critical to ensuring Australia can harness the full potential of new treatments.\(^4\)

This practical webinar will allow you to gain knowledge and get involved in this important public health initiative. Your local hepatitis C expert will show you the step-by-step process for assessing, diagnosing, choosing therapy, prescribing, and following up patients with hepatitis C. You will come away with useful tools and information to give you confidence in treating or referring your own patients.

Join us to help wipe hepatitis C off the map\(^1\)
